

# Intro to Data Science

## Regression

### Lab 3

1	ESTIMATING AND INTERPRETING MODEL COEFFICIENTS.....	1
2	GENERATING PREDICTIONS FROM THE MODEL .....	1
3	ERRORS AND RESIDUALS .....	2
4	HYPOTHESIS TESTING WITH T-CUTOFF .....	2
5	HYPOTHESIS TESTING WITH P-VALUES .....	2
6	HYPOTHESIS TESTING WITH CONFIDENCE INTERVALS .....	2
7	CASE STUDY: HOME PRICES .....	2
8	R-SQUARED AND GOODNESS OF FIT .....	2
9	DUMMY VARIABLES TO HANDLE CATEGORICAL VARIABLES .....	2
10	INTERPRETATION OF DUMMY VARIABLES FOR MULTIPLE CATEGORIES .....	2
11	CASE STUDY: REFRIGERATORS.....	3
12	MULTICOLLINEARITY CASE STUDY .....	3
13	MEAN CENTERING VARIABLES.....	3
14	BUILDING CONFIDENCE LEVELS .....	3
15	INTERACTION EFFECTS IN REGRESSION MODELS .....	3

## 1 Estimating and interpreting model coefficients

File to use: Toy-Sales-pt1

We estimate / generate the model in Excel using the Regression function in Excel's Analysis ToolPak. This gives us the coefficients / parameters of the regression model as well as associated info such as R-Squared, confidence intervals, etc that we will explore later.

## 2 Generating predictions from the model

File to use: Toy-Sales-pt2

We generate predictions from the model by substituting values for the various explanatory variables for the different scenarios that we wish to obtain a predicted value for.

### 3 Errors and Residuals

File to use: Toy-Sales-pt3

### 4 Hypothesis testing with t-cutoff

File to use: Toy-Sales-pt4

### 5 Hypothesis testing with p-values

File to use: Toy-Sales-pt5

### 6 Hypothesis testing with confidence intervals

File to use: Toy-Sales-pt6

### 7 Case Study: Home Prices

File to use: Home\_Prices-pt7

### 8 R-Squared and Goodness of fit

File to use: Home\_Prices-pt8

Point: If using the RANDBETWEEN function to generate the random numbers, you will need to select the entire range of cells first and then specify the RANDBETWEEN function and press Ctrl + Enter

### 9 Dummy variables to handle categorical variables

File to use: Deliveries-pt9

### 10 Interpretation of dummy variables for multiple categories

File to use: Deliveries-pt10

## 11 Case study: Refrigerators

File to use: Refrigerators-pt11

## 12 Multicollinearity case study

File to use: Cars-pt12

## 13 Mean Centering Variables

File to use: Height-and-Weight-pt13

## 14 Building Confidence Levels

File to use: Height-and-Weight-pt14

## 15 Interaction effects in Regression models

File to use: Height-and-Weight-pt15
